Purpose of this Q and A type document

Purpose of this Q and A type document

The purpose of this list is to check and enhance the *awareness* for security problems e.g. in web applications. It is the interplay of security technologies that is important - driven by a security framework that defines policies and strategies.

Of course knowledge about specific security technologies is needed as well, so the questions go from more complex ones which offer opportunities for design discussions to simpler ones which cover specific technologies.

I would like to thank Rüdiger Gunreben for contributing to this list.
